OWASP Top 10 for LLM Applications

LLM01

Prompt Injection

This manipulates a large language model (LLM) through crafty inputs, causing unintended actions by the LLM. Direct injections overwrite system prompts, while indirect ones manipulate inputs from external sources.

LLM02

Insecure Output Handling

This vulnerability occurs when an LLM output is accepted without scrutiny, exposing backend systems. Misuse may lead to severe consequences like XSS, CSRF, SSRF, privilege escalation, or remote code execution.

LLM03

Training Data Poisoning

This occurs when LLM training data is tampered, introducing vulnerabilities or biases that compromise security, effectiveness, or ethical behavior. Sources include Common Crawl, WebText, OpenWebText, & books.

LLM04

Model Denial of Service

Attackers cause resource-heavy operations on LLMs, leading to service degradation or high costs. The vulnerability is magnified due to the resource-intensive nature of LLMs and unpredictability of user inputs.

LLM05

Supply Chain Vulnerabilities

LLM application lifecycle can be compromised by vulnerable components or services, leading to security attacks. Using third-party datasets, pre-trained models, and plugins can add vulnerabilities.

LLM06

Sensitive Information Disclosure

LLMs may inadvertently reveal confidential data in its responses, leading to unauthorized data access, privacy violations, and security breaches. It's crucial to implement data sanitization and strict user policies to mitigate this.

LLM07

Insecure Plugin Design

LLM plugins can have insecure inputs and insufficient access control. This lack of application control makes them easier to exploit and can result in consequences like remote code execution.

LLM08

Excessive Agency

LLM-based systems may undertake actions leading to unintended consequences. The issue arises from excessive functionality, permissions, or autonomy granted to the LLM-based systems.

LLM09

Overreliance

Systems or people overly depending on LLMs without oversight may face misinformation, miscommunication, legal issues, and security vulnerabilities due to incorrect or inappropriate content generated by LLMs.

LLM10

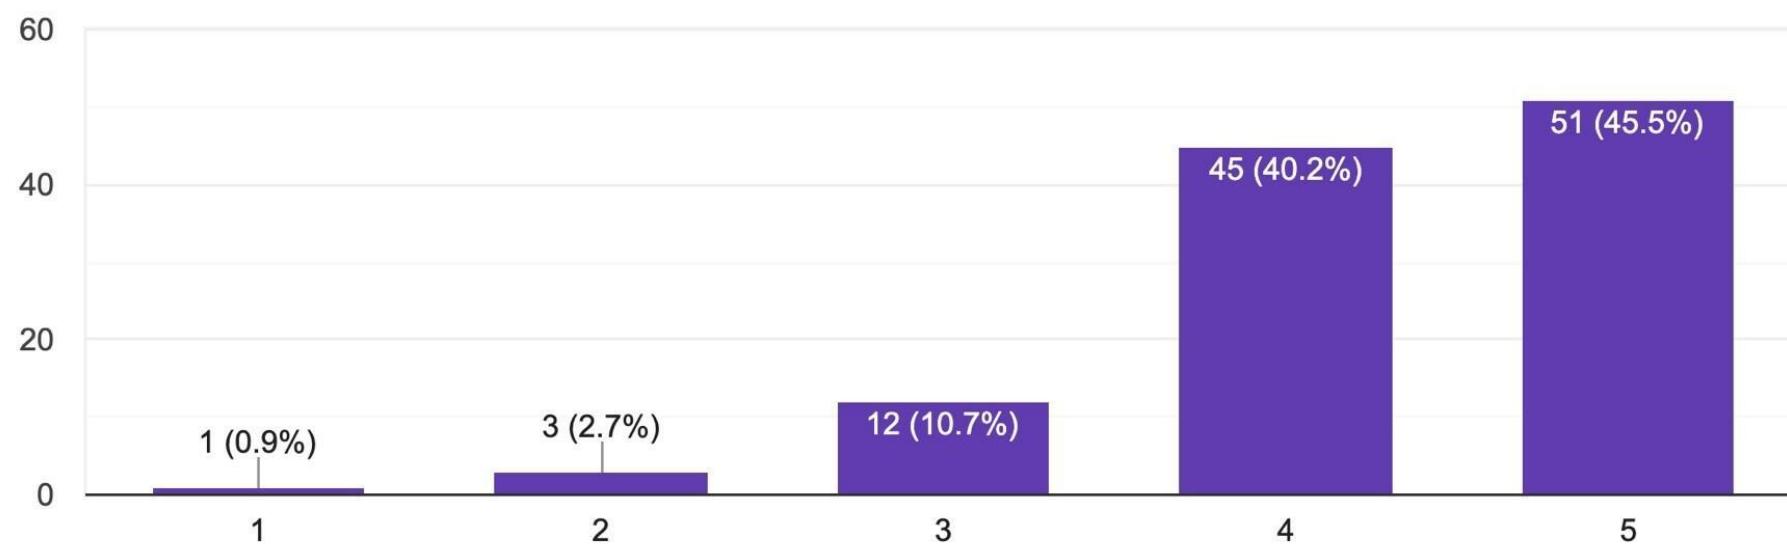

Model Theft

This involves unauthorized access, copying, or exfiltration of proprietary LLM models. The impact includes economic losses, compromised competitive advantage, and potential access to sensitive information.

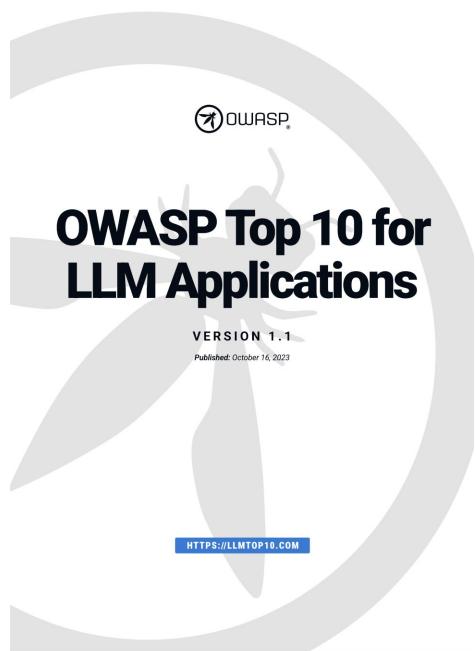

A Positive Reception

How would you rate the usefulness of the current version of the OWASP Top 10 for LLM Apps document?

Beyond Security

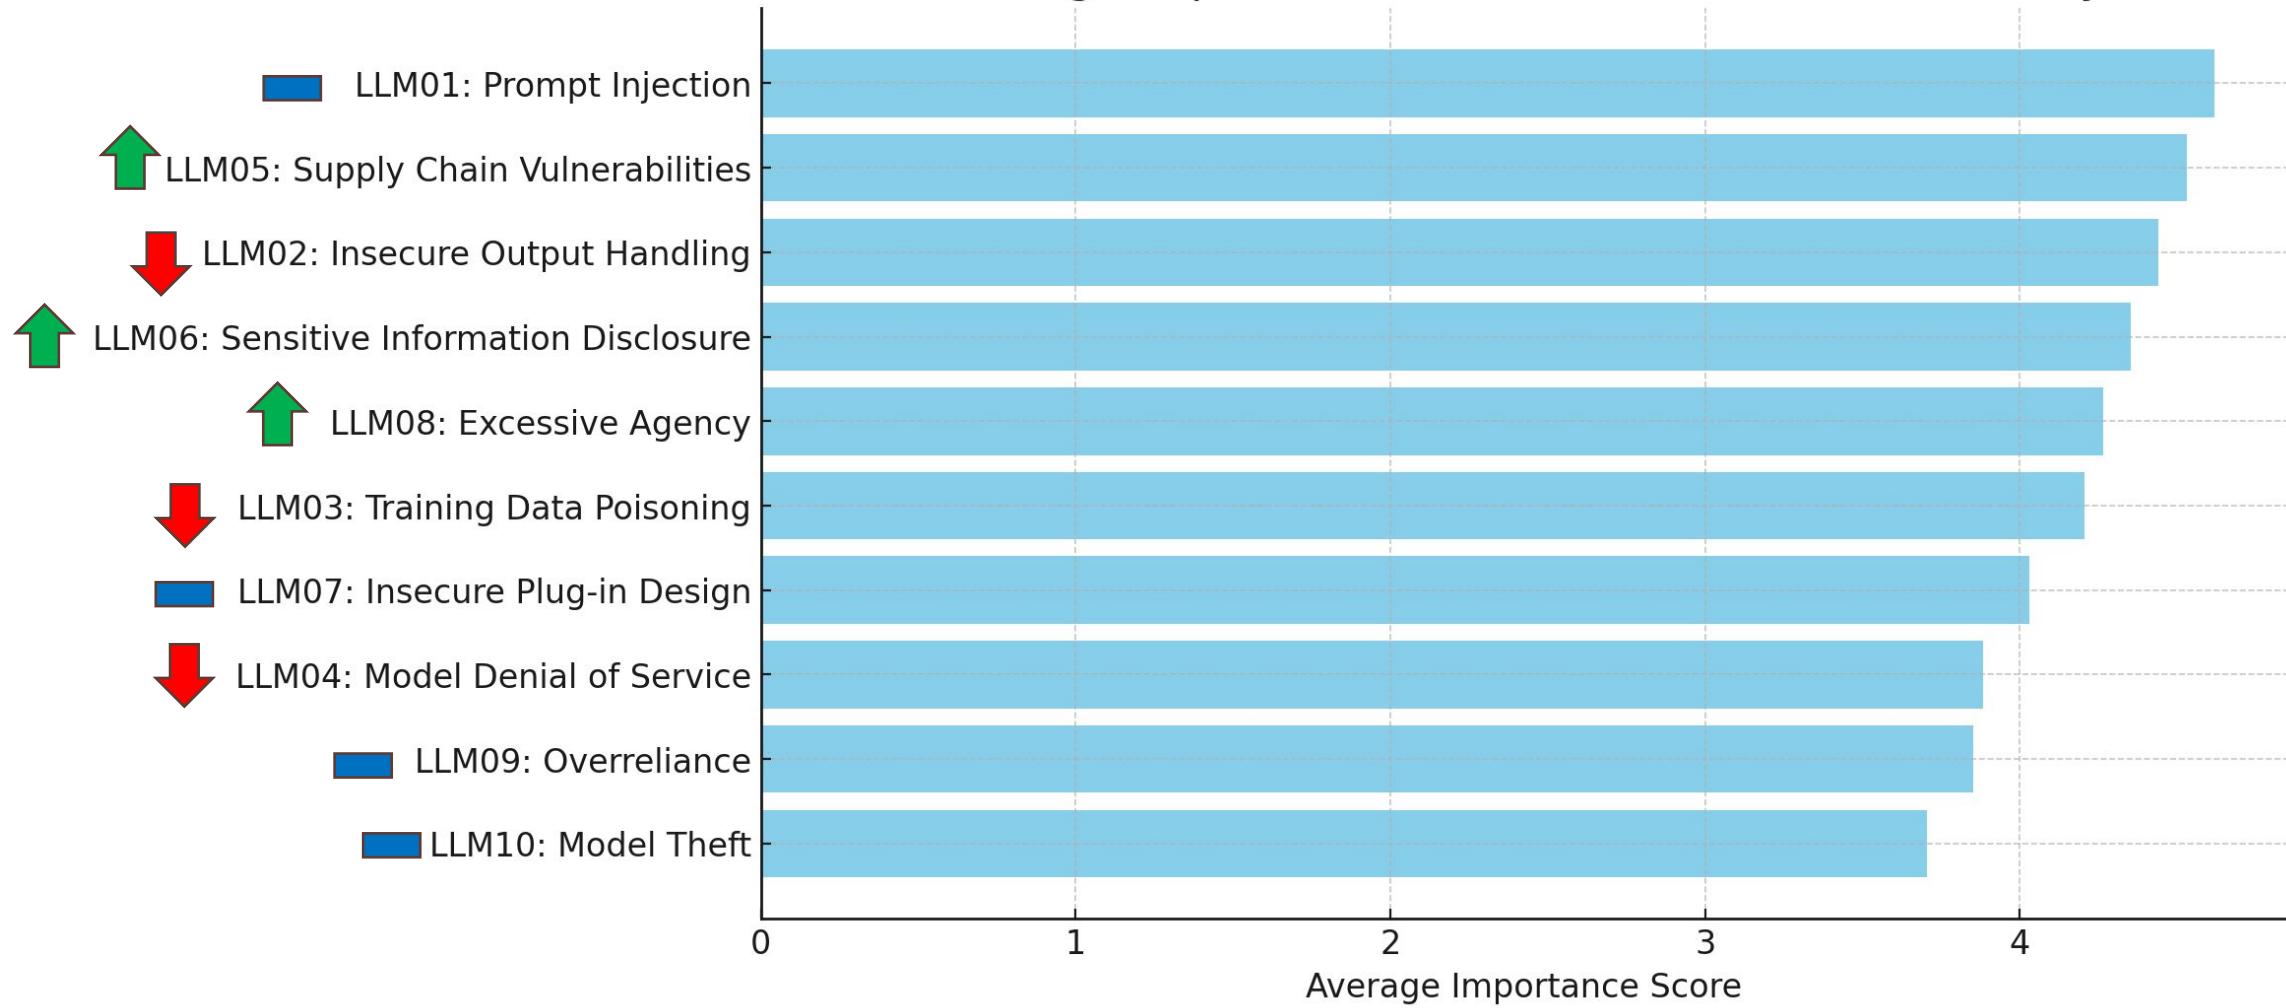

How Important do you consider these topics to be for the 2.0 expert group to consider?

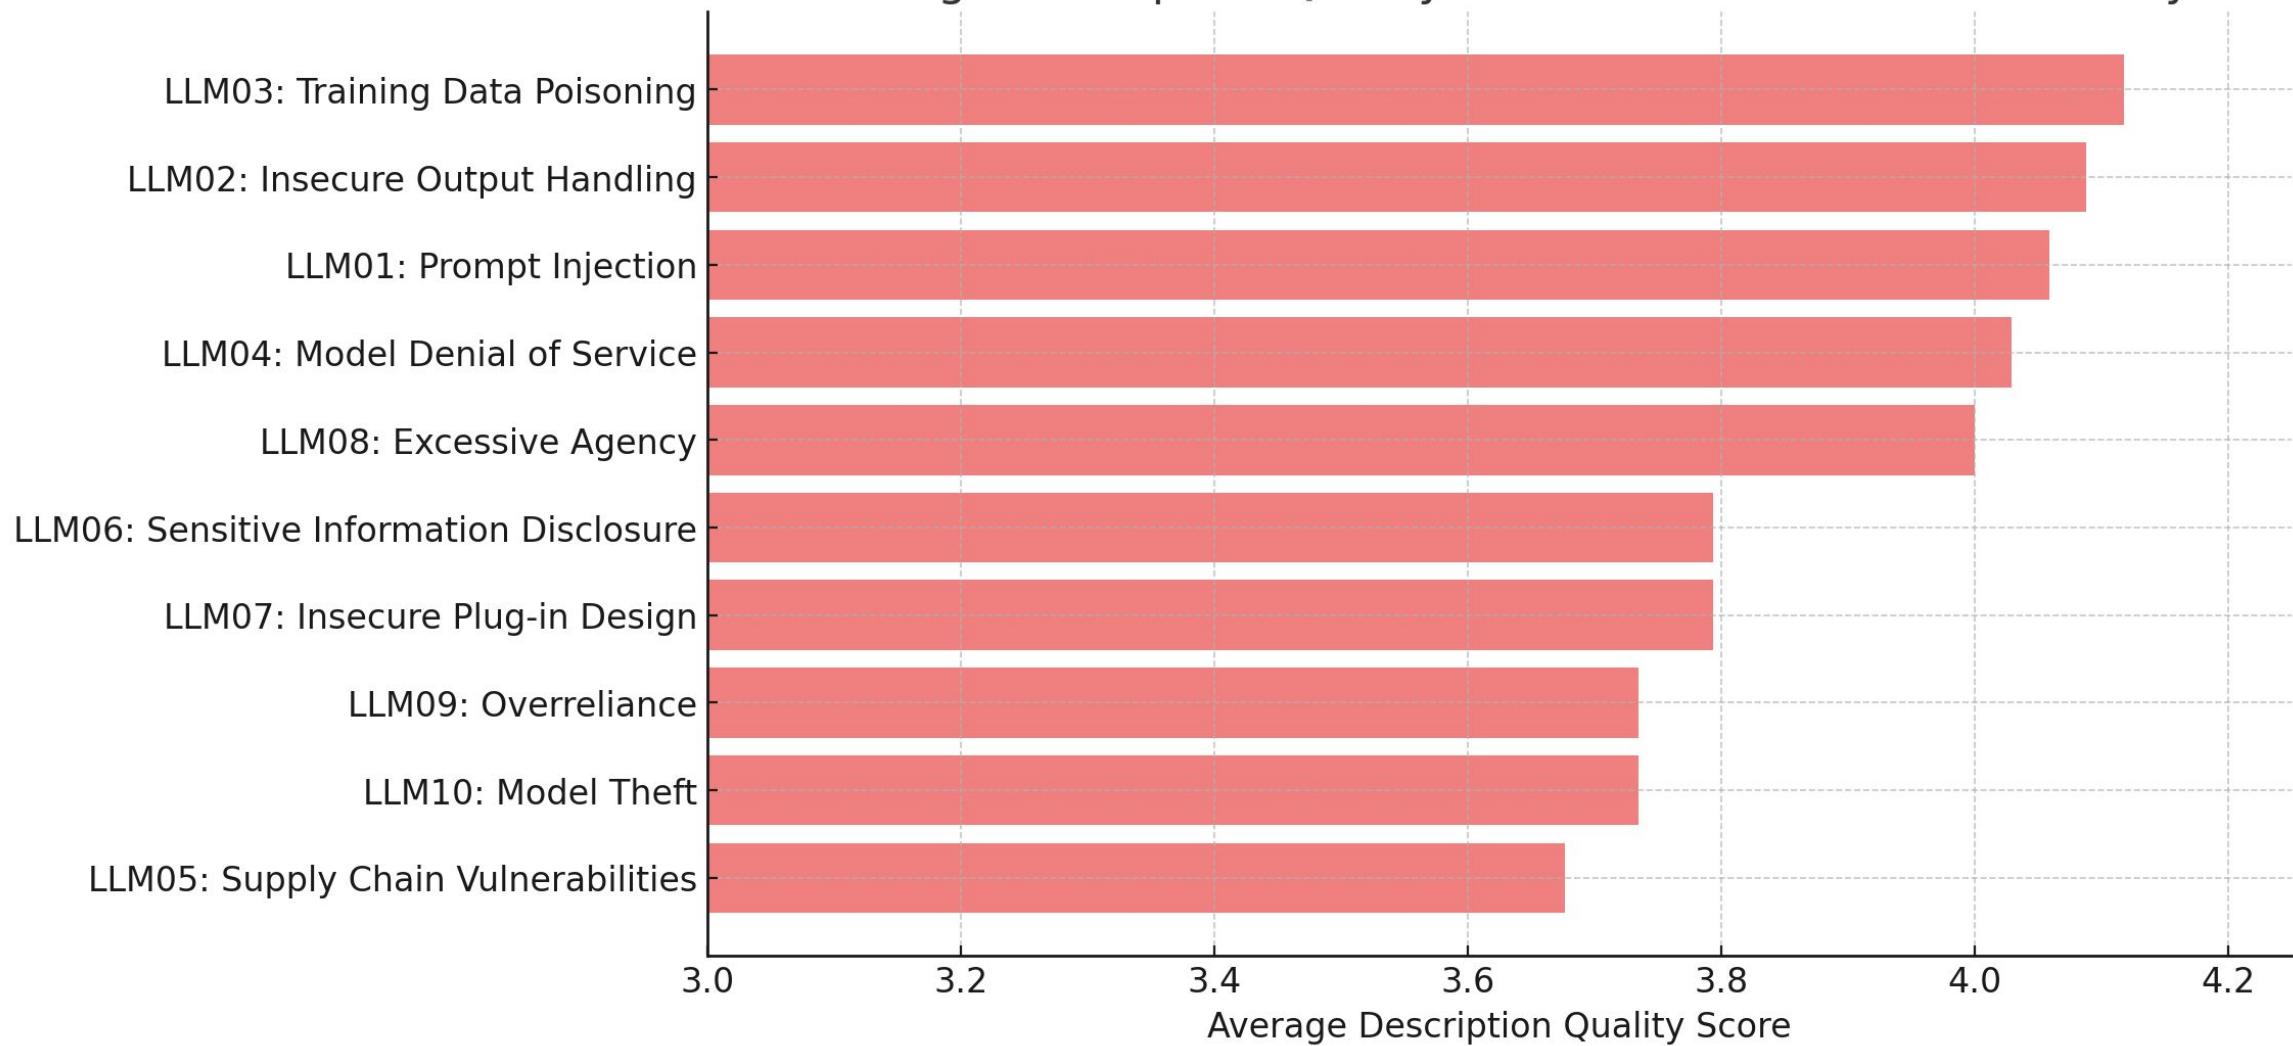

2.0 Roadmap

Start	End	Task	Major Teams Involved	2.0 Major Tasks
April 15, 2024	April 30, 2024	Voting on existing entries	Everyone, wide community push	Improve, enhance, formulate new ideas and bring new emerging threats into the fold
May 1, 2024	May 8, 2024	Voting collation and publication	Core team project management	
May 15, 2024	June 15, 2024	Call for new entries	Community, current entry leads	What have we learned since v1.1 and what are our gaps
June 16, 2024	June 30, 2024	Entry voting	Everyone, wide community push	Make v2.0 relevant to the current landscape
July 1, 2024	July 15, 2024	Voting collation and publication	Core team leaders & data gathering team	Ensure v2.0 is accurate from the community input and data
July 15, 2024	Aug 1, 2024	Merging down and selection	Core team leaders & data gathering team	Coalesce current entries into existing and introduction of new entries
Aug 1, 2024	Sep 1, 2024	Data analysis and voting for ranking	Everyone, wide community push - New entry leads opportunities	
Sep 1, 2024	Sep 15, 2024	Entry clean up	Entry vulnerability leads, community raised issues into triage	Work through the GitHub issue triage to tune vulnerabilities, prior to publication
Sep 15, 2024	Sep 30, 2024	Layout, pre-announcement work	Core team design, social and project leads	Make v2.0 our best version yet
Oct 1, 2024		Publish 2.0	Social and project leads	Increase our community and stakeholders!

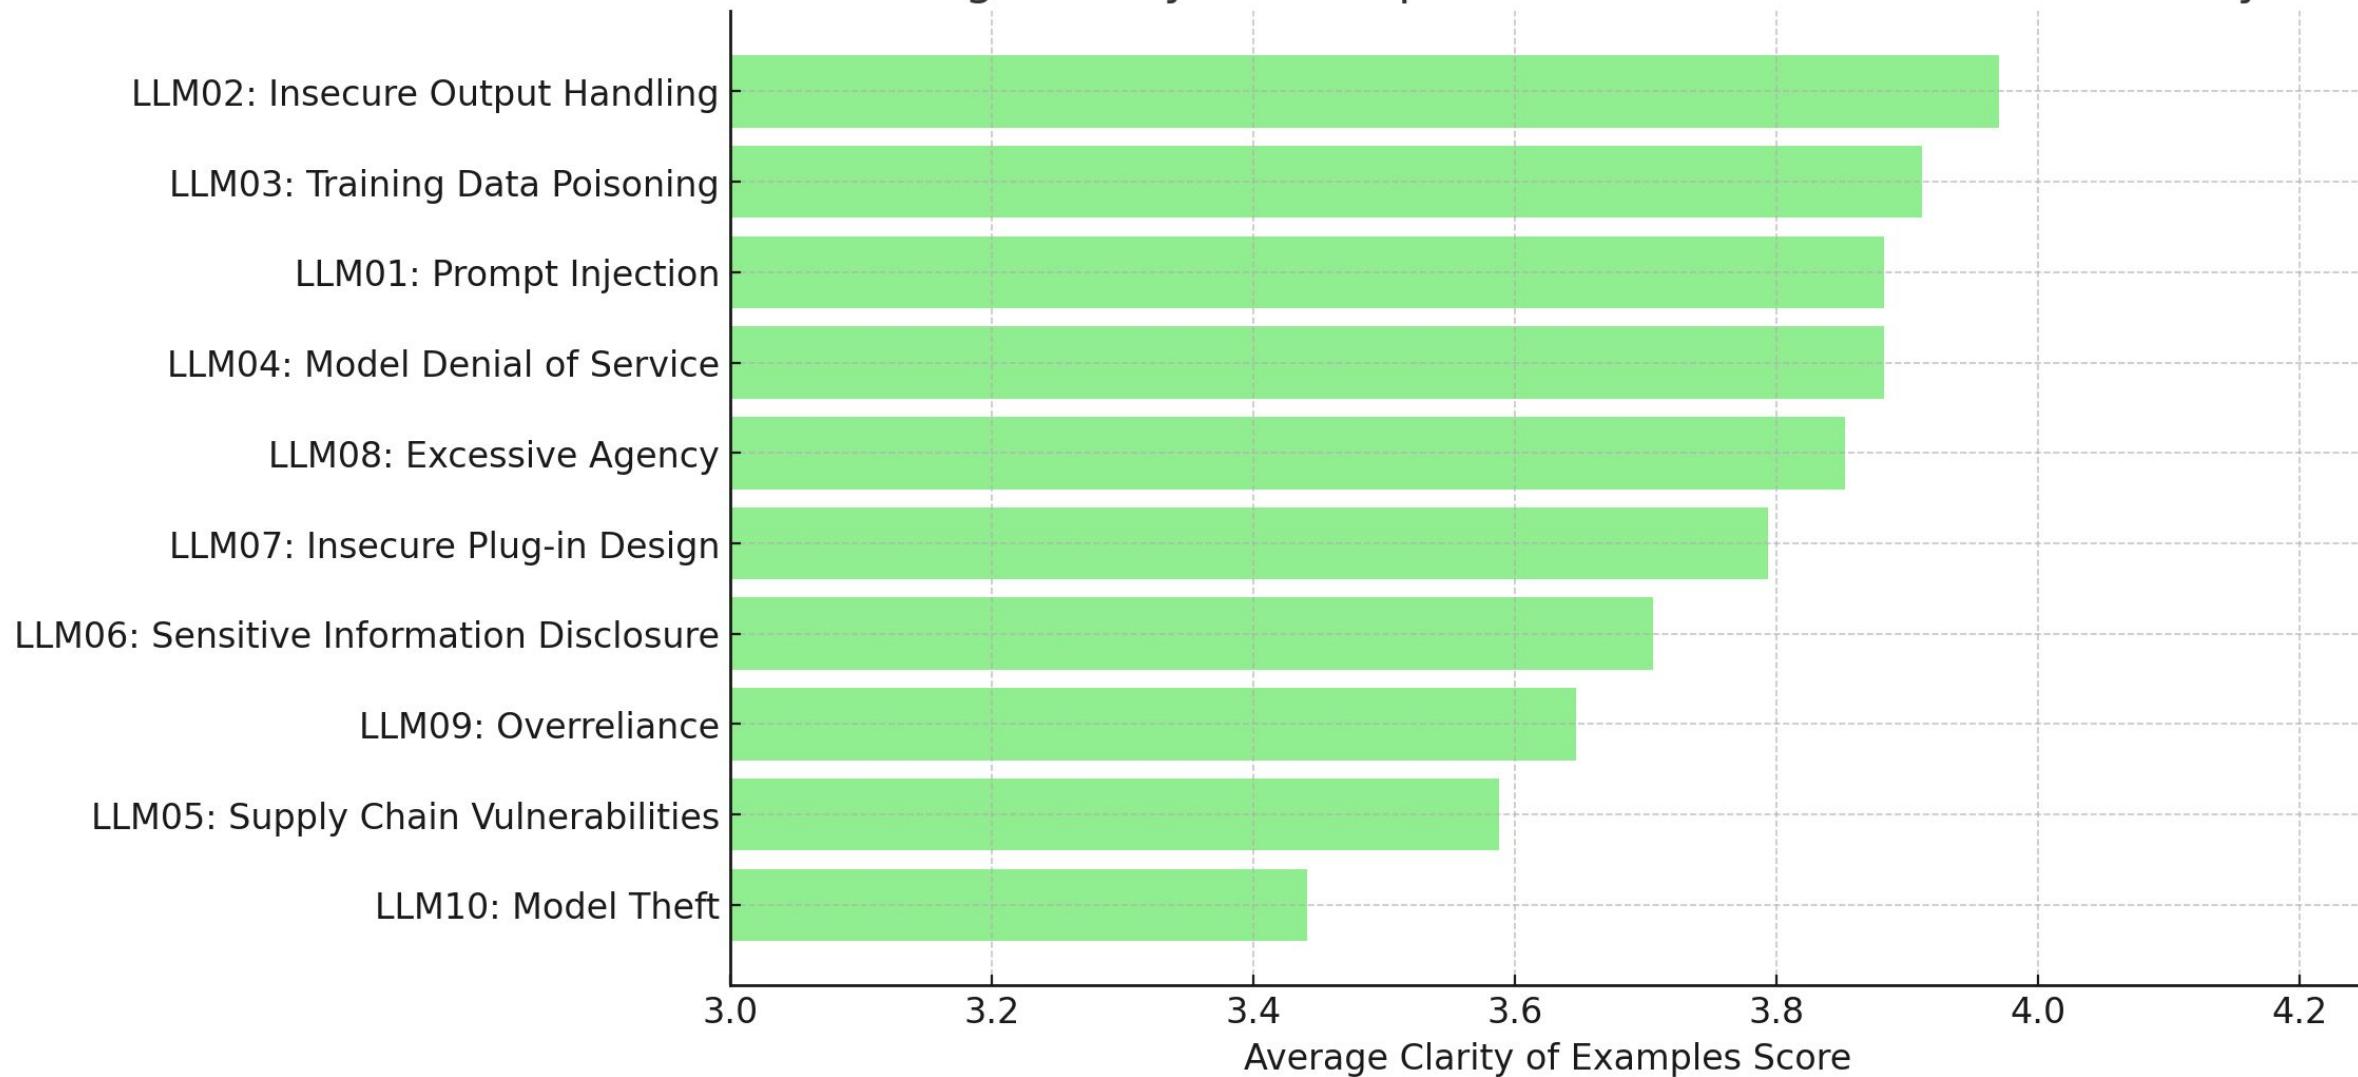

Average Importance Score for Each LLM Vulnerability

Average Clarity of Examples Score for Each LLM Vulnerability

Average Effectiveness of Mitigations Score for Each LLM Vulnerability

Average Relevant Attack Scenarios Score for Each LLM Vulnerability

99 Problems but a GitHub Issue ain't One

The screenshot shows a GitHub repository page for "OWASP / www-project-top-10-for-large-language-model-applications". The top navigation bar includes links for Product, Solutions, Open Source, and Pricing. Below the header, the repository name is displayed along with a "Public" badge.

The main content area shows a list of 33 issues. At the top of this list is a search bar with the query "is:issue sort:updated-asc". To the right of the search bar are buttons for "Labels 22" and "Milestones 0", and a "New issue" button.

A sidebar on the left lists various labels with their descriptions and counts:

- enhancement**: Changes/additions to the Top 10; eg. clarifications, examples, links to external resources, etc. (10)
- bug**: Factual inaccuracies, broken links, typos, etc. (6)
- v2**: A topic for v2 discussion (5)
- diagram**: Issues related to the Top 10 diagram (5)
- website**: Indicates an issue specific to llmtop10.com (5)
- pdf**: Indicates an issue specific to the PDF document (5)

The main issue list displays several entries:

- Wiki Request - FAQ**: #12 by GTKloned was closed on Jul 28, 2023. Labels: enhancement, llm-06. 3 comments.
- Add privacy concern when training model using PII and other sensitive data#LLM06**: #113 by ManishYadu7 was closed on Aug 14, 2023. Labels: enhancement, llm-06, wontfix. 1 comment.
- Diversity in building the model and training it LLM03**: #114 by ManishYadu7 was closed on Aug 14, 2023. Labels: enhancement, llm-03, wontfix. 1 comment.
- llmtop10.com: minor issue with menu button on mobile**: #110 by mattbit was closed on Aug 29, 2023. Labels: bug, website. 8 comments.

v2.0 Major Targets

- **Consolidate and delineate v2.0 entries** with other frameworks and methodologies (A0x, CWE's, CVE's) to improve accuracy of the entries and continue to align with other major bodies such as NIST, MITRE, OWASP AI Exchange etc
- **Refresh the visuals** to accommodate newly adopted features into LLM applications that were not developed in v1.0 (I.E RAG, advanced autonomous agent flows, code interpreters) and architecture types (I.E REST) with model conversation for context
- **Guidance on threat modeling** LLM applications in relation to the entries and visuals to establish clear trust boundaries to better clarify example attack scenarios and mitigations
- **Increase scope of translations** (currently published DE, HI, JA, PT, ZH)
- **Migrate our site** to a better web hosting solution
- **Better automate our triage** to accommodate self-service workflows and efficient issue resolutions
- **Reframe the project's name/identity?**

A screenshot of a GitHub pull request search results page. At the top, there is a search bar with the query "is:pr" and a "New pull request" button. Below the search bar are filters for "Labels" (23), "Milestones" (0), and a "Clear current search query, filters, and sorts" link. The main area shows a single pull request card for "#309". The card includes the title "docs: Ads/add de v1 1 translations", a status indicator showing "translations" (yellow), and a note "#309 by GangGreenTemperTatum was merged 1 minute ago • Review required 2 tasks". Navigation links at the bottom include Author, Label, Projects, Milestones, Reviews, Assignee, and Sort.

Important Vulns Not Covered?

- **Hallucinations and Bias Injection:** Highlight the need to mitigate hallucinations and bias that cause incorrect or unethical LLM outputs.
- **Prompt Leakage and Jailbreaking:** Address vulnerabilities such as system prompt leakage that lets attackers bypass controls, and multi-turn jailbreak attacks.
- **Denial of Wallet and Resource Abuse:** Point out issues from misuse or overuse of LLM resources that lead to unnecessary costs.
- **Third-party Data Exposure and Model Inversion Attacks:** Focus on risks of exposing sensitive data via third-party integrations and model inversion.
- **Insecure Agent and Proxy Style Attacks:** Discuss the risks of insecure agents and potential MITM-style attacks within complex app flows.

Other Feedback?

- **Detailed Mitigation Strategies:** Emphasize the need for detailed strategies including least privilege access and continuous monitoring for high-risk areas.
- **Clarifications and Definitions:** Update and clarify terminology, for example, changing "plugins" to "extensions" and clarifying LLM input encoding.
- **Inclusion of New Technologies and Scenarios:** Address vulnerabilities associated with new technologies like orchestration agents and risks from worm attacks lacking proper output handling.
- **Integration of Data Privacy and Security Concerns:** Enhance focus on preventing data leakage during training and effectively use privacy technologies like differential privacy.
- **Consolidation and Reevaluation of Vulnerabilities:** Consider consolidating similar vulnerabilities and reevaluating the feasibility of scenarios like model theft through API queries.

Website Feedback

- **Usability and Accessibility Enhancements:** Improve site navigation and document access, including HTML document rendering and better file download support for various browsers.
- **Content Updates and Clarity:** Update content with current attack examples and research integration to maintain relevance in the fast-evolving field of Gen AI.
- **Design and Aesthetics:** Enhance design by centering elements and using color coding or tags for clearer, more informative diagrams.
- **Interactivity and Engagement:** Increase interactivity to aid users in understanding how vulnerabilities affect their specific applications, using personalized content and tools.
- **Site Maintenance and Promotion:** Ensure up-to-date content and no broken links; consider more active promotion and featuring core team members.

Let's Talk About Tay

- Microsoft experimental chatbot
- Designed to simulate a 20-year-old female friend
- Interact via Twitter, Snapchat, etc.

hellooooooo w**o**rld!!!
