

BRIEFINGS SESSIONS

ALL SESSIONS	Kinetic Prompt Injection: Agent Compromise With a Physical Blast Radius
SPEAKERS	Pliny the Liberator Directs Frontier-Model Research, BT6 Philip (in)j Dursey Managing Director, BT6 Adrian (threlfall) Wood Frontier AI Red Team Operator, BT6 Ads (0xmoose) Dawson Senior Frontier AI Red Team Operator, BT6 Dustin (ph1r3574r73r) Farley Frontier AI Red Team Operator, BT6 Sean (seahop) Hopkins Frontier AI Red Team Operator, BT6 Date: Thursday, August 6 10:15am-10:45am (Oceanside C, Level 2) Format: 30-Minute Briefings Track: AI, ML, & Data Science
	Prompt injection is usually treated as a text problem contained on a screen: a bad output, leaked data, a rogue tool call. This one isn't. A live jailbreak of a stock Unitree Go2 robot dog running Gemini Robotics-ER 1.6, reached through its own camera and mic and driven to physical movement, no human in the loop. Underneath the demo is a measurement problem: agents behave differently when they know they're being tested, so a clean evaluation score doesn't mean the unsafe behavior is gone. The talk covers the attack live, a taxonomy of how these systems fail, why current testing misses it, and what defenders should change. Live hardware, on stage.

All times are Pacific Time (GMT/UTC -7h)
